EDUCATION

Northeastern University, Boston, MA
Khoury College of Computer Sciences

Master of Science in Data Science

Related Courses: Essentials of Data Science, Algorithms, Machine Learning, Database Management Systems

Jan. 2026 – Present
Expected Graduation: May. 2028

Stanley College of Engineering and Technology for Women, Hyderabad, India

Bachelor of Engineering in Computer Science

Related Courses: Data Mining, Programming in Python, Machine Learning, Database Management System, Cloud computing,

Nov. 2021- May.2025

SKILLS

Programming Languages:	Python, SQL, R, Java
Data Analysis:	NumPy, Pandas, Scikit-Learn, Plotly, PowerBI
Databases:	MySQL, PostGreSQL, Relational Databases
Machine Learning:	Supervised learning, Classification, Regression, Feature Engineering
Developer Tools:	Git, GitHub, VS Code, Jupyter Notebook
Web/Software:	Flask, React, HTML/CSS/JavaScript

PROFESSIONAL EXPERIENCE

Ernst & Young Associates LLP, Hyderabad, India

Analyst

July. 2025- Dec. 2025

- Developed Python-based data processing and automation pipelines to transform and validate enterprise-scale datasets, reducing manual analytical workflows.
- Performed data cleaning, validation, preprocessing, and quality checks to improve reliability of downstream analytics. Built and supported data-driven dashboards and analytical workflows for manufacturing operations, collaborating with cross-functional technical teams.
- Worked with structured operational data and databases to identify trends, investigate data issues, and support engineering decision-making. Collaborated with technical stakeholders to translate business and engineering requirements into scalable data solutions.

ACADEMIC PROJECTS

Semantic Data Intelligence Platform

May.2026 – June.2026

Python, streamlit, Pandas, Plotly, Data Quality, Knowledge Graphs

- Developed an interactive Python/Streamlit platform for semantic dataset discovery, trust assessment, and relationship mining across heterogeneous datasets.
- Implemented data quality scoring, semantic relationship graphs, dataset matching, geospatial analytics, and automated exploration using Pandas, Plotly, and data-quality methods.

Bike Rental Demand Forecasting & PowerBI Dashboard

April.2026 - April.2026

Northeastern University, Boston, MA

- Analyzed 16K+ hourly records using Python/Pandas and engineered calendar, lag, rolling-average, weather, and demand features for forecasting. Evaluated regression and ensemble models using **time-based validation**, achieving $R^2 = 0.95$ with Gradient Boosting after tuning. Conducted exploratory data analysis to identify demand patterns across hours, weather conditions, and day periods.
- Built an interactive Power BI dashboard communicating demand trends, forecast accuracy, peak periods, and model performance for business decision-making.

Large-Scale Predictive Modeling on 1M+ Crime Record

Jan.2026 - Feb.2026

Northeastern University, Boston, MA

- Cleaned and analyzed 1M+ Los Angeles crime records using Python/R to identify temporal, geographic, and demographic patterns. Built a logistic regression model to classify outcomes, achieving $AUC = 0.63$, and interpreted results using odds ratios and feature-importance visualizations.
